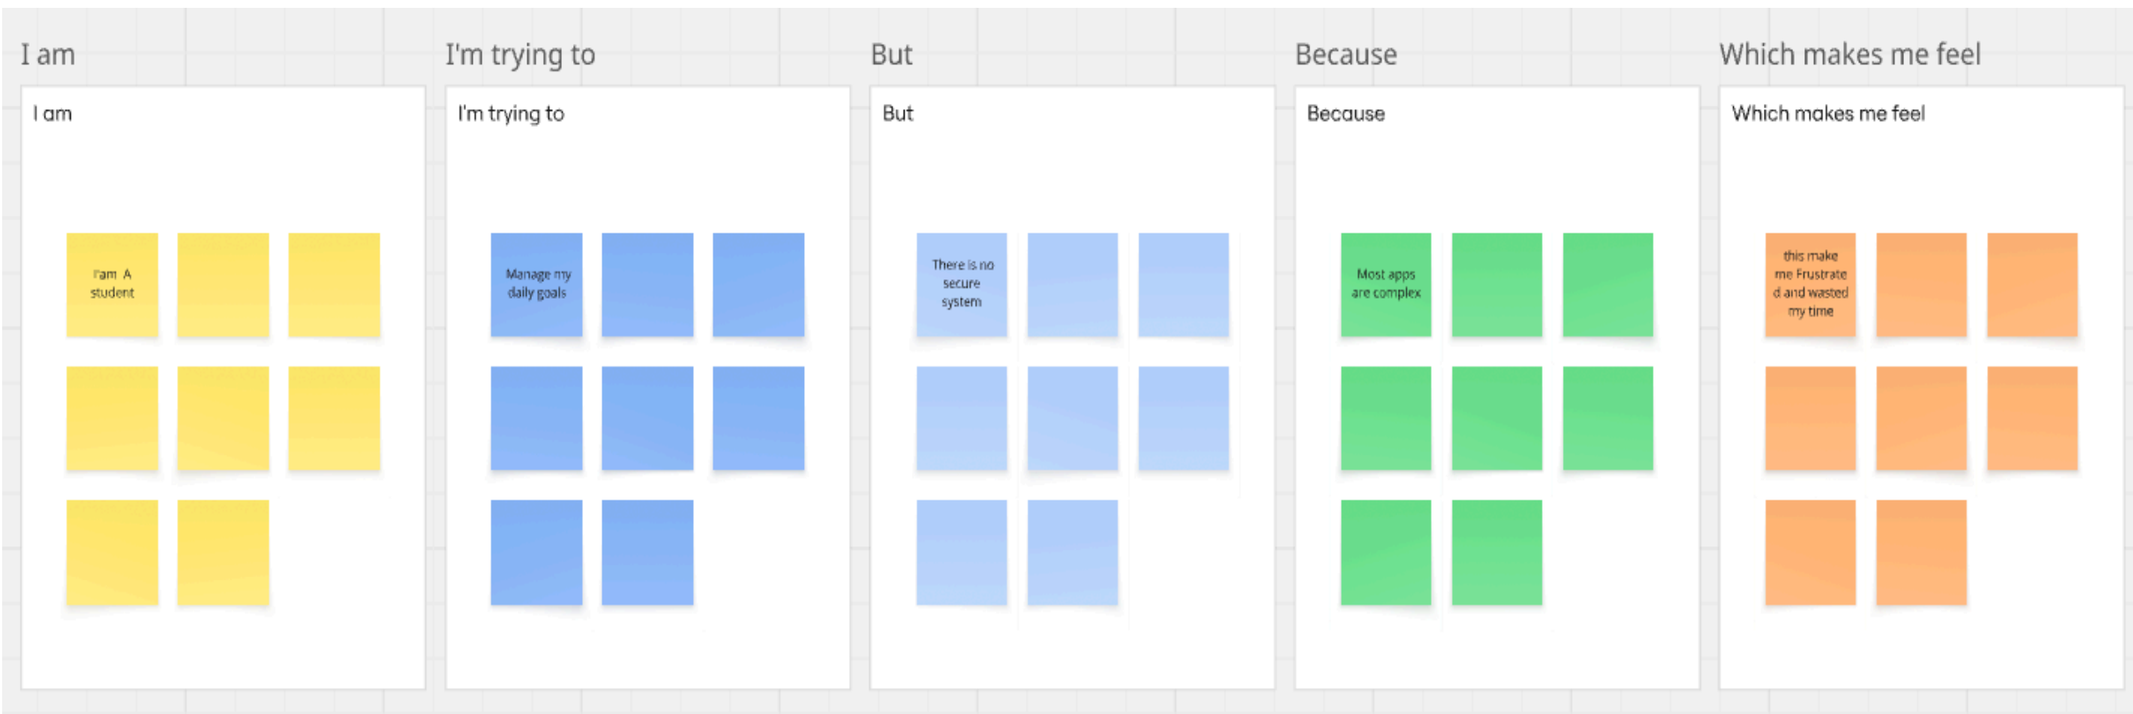
Problem Statement

Many people struggle to manage and track their daily and long-term goals because existing systems are either not secure, too complicated, or do not provide proper authentication and data privacy. Users need a simple and secure backend system where they can store, update, and retrieve their goals easily.



PS ID	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student	Manage my daily goals online	There is no simple secure system	Most apps are complex or unsafe	Frustrated

PS-2	**A working professional**	Track and update my personal goals	Existing systems do not protect my data	Authentication is missing or weak	**Insecure**
PS-3	**A beginner developer**	Build a goal management backend	Implementing authentication is difficult	JWT and middleware setup is complex	**Confused**
PS-4	**A user**	Access my goals anytime	Some systems are not structured properly	Poor backend architecture	**Unsatisfied**
