# Solution Architecture

The solution architecture for the **MicroGoals Backend API** ensures a secure, scalable, and structured system for managing user authentication and goal tracking efficiently.

---

## Goals of the Solution Architecture

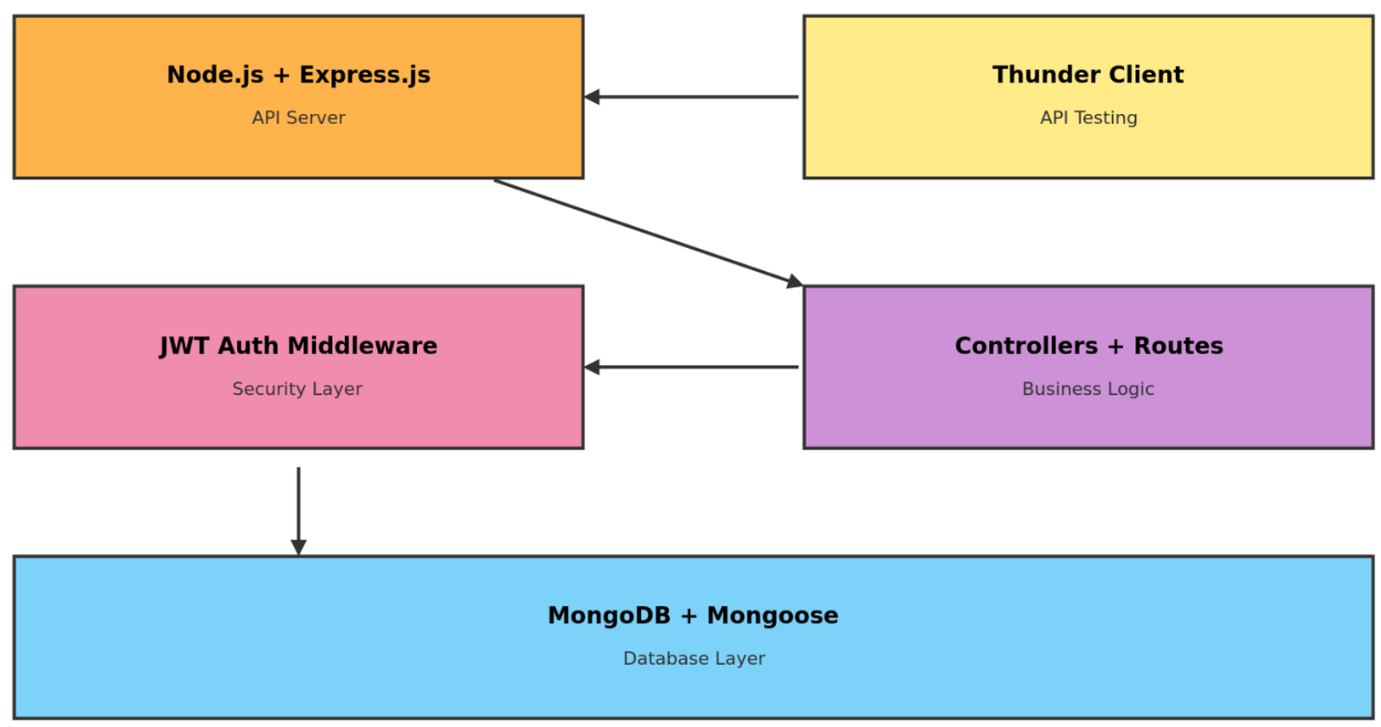
---

### 1 Identify the Best Technical Solution

- Use **Node.js**
  for server-side runtime.
- Use **Express.js**
  for building RESTful APIs.
- Use **MongoDB**
  as a NoSQL database for flexible data storage.
- Use **JWT (JSON Web Token)**
  for secure authentication.
- Use **Mongoose**
  for schema modeling and database interaction.
- Use **Thunder Client**
  for API testing and validation.

This stack ensures lightweight, fast, and scalable backend performance.

### Define Structure:-

# Solution Architecture - MicroGoals Backend API


Layered architecture with API, security, and data tiers
